

Part 2: Tine 01

Making the numbers agree

WHAT THE TUTORIAL SAYS

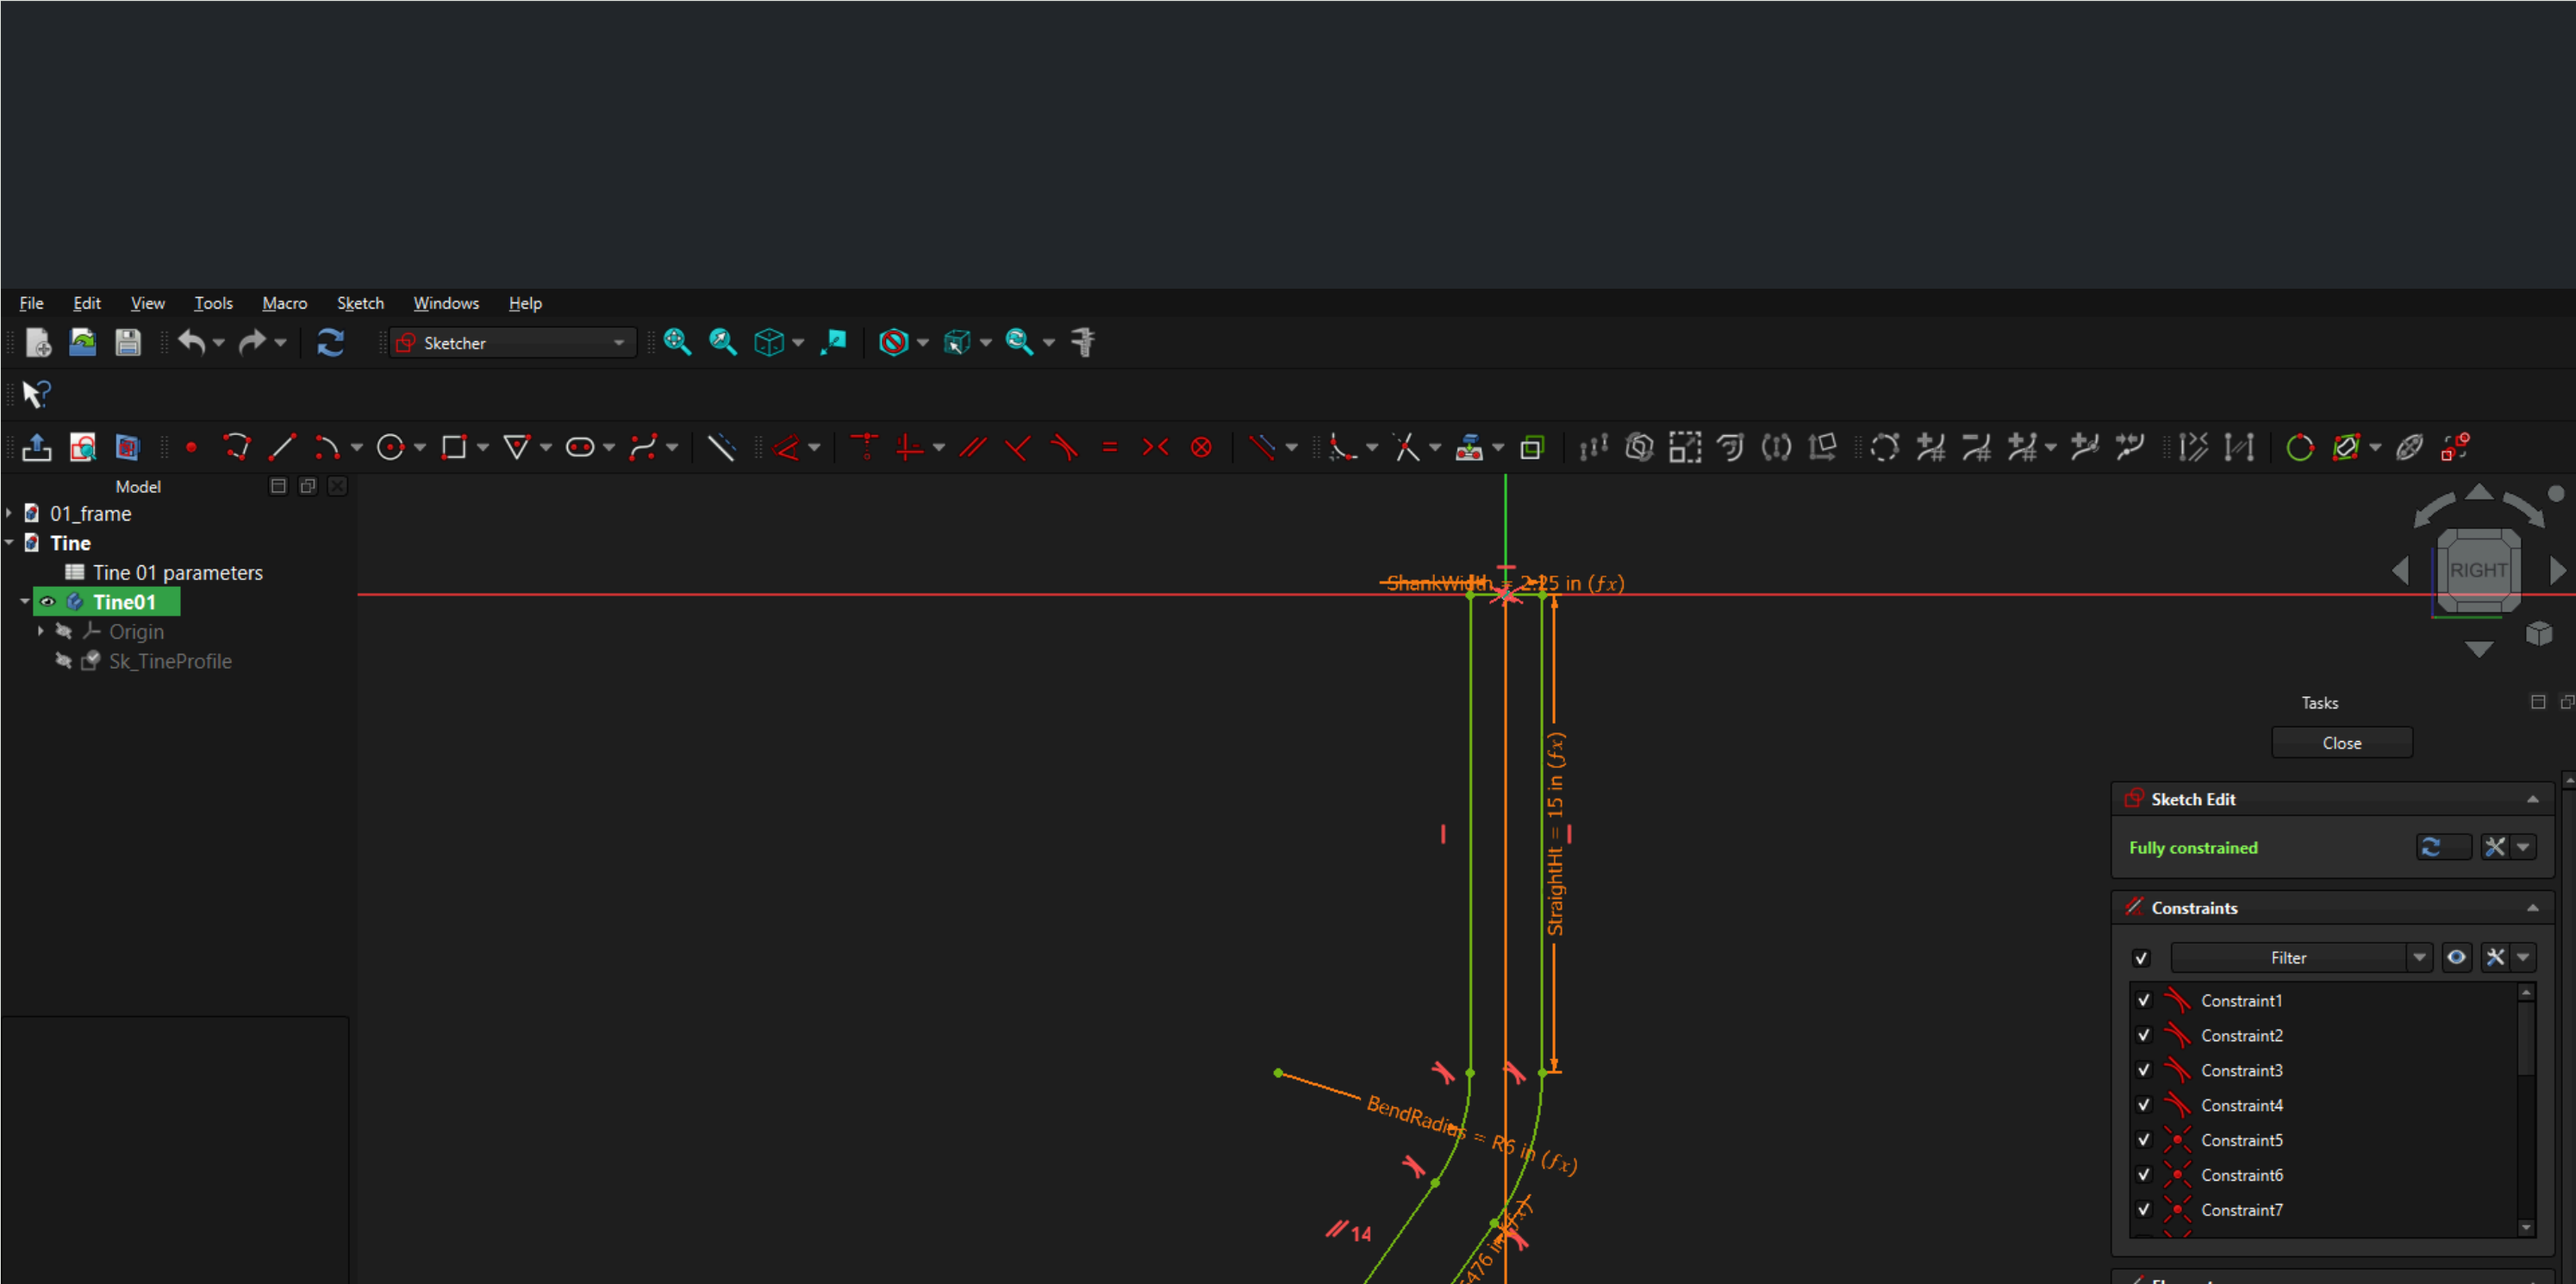

- “Length: 25 inches”
- “The height between these two points is 15 inches”
- “Distance between the two points: 2.25 inches”
- “Dimension: 1.5 inches”
- “Two holes 0.5 inches, 3 inches apart”

Twenty-five inches and fifteen inches are both stated. They only make sense together.

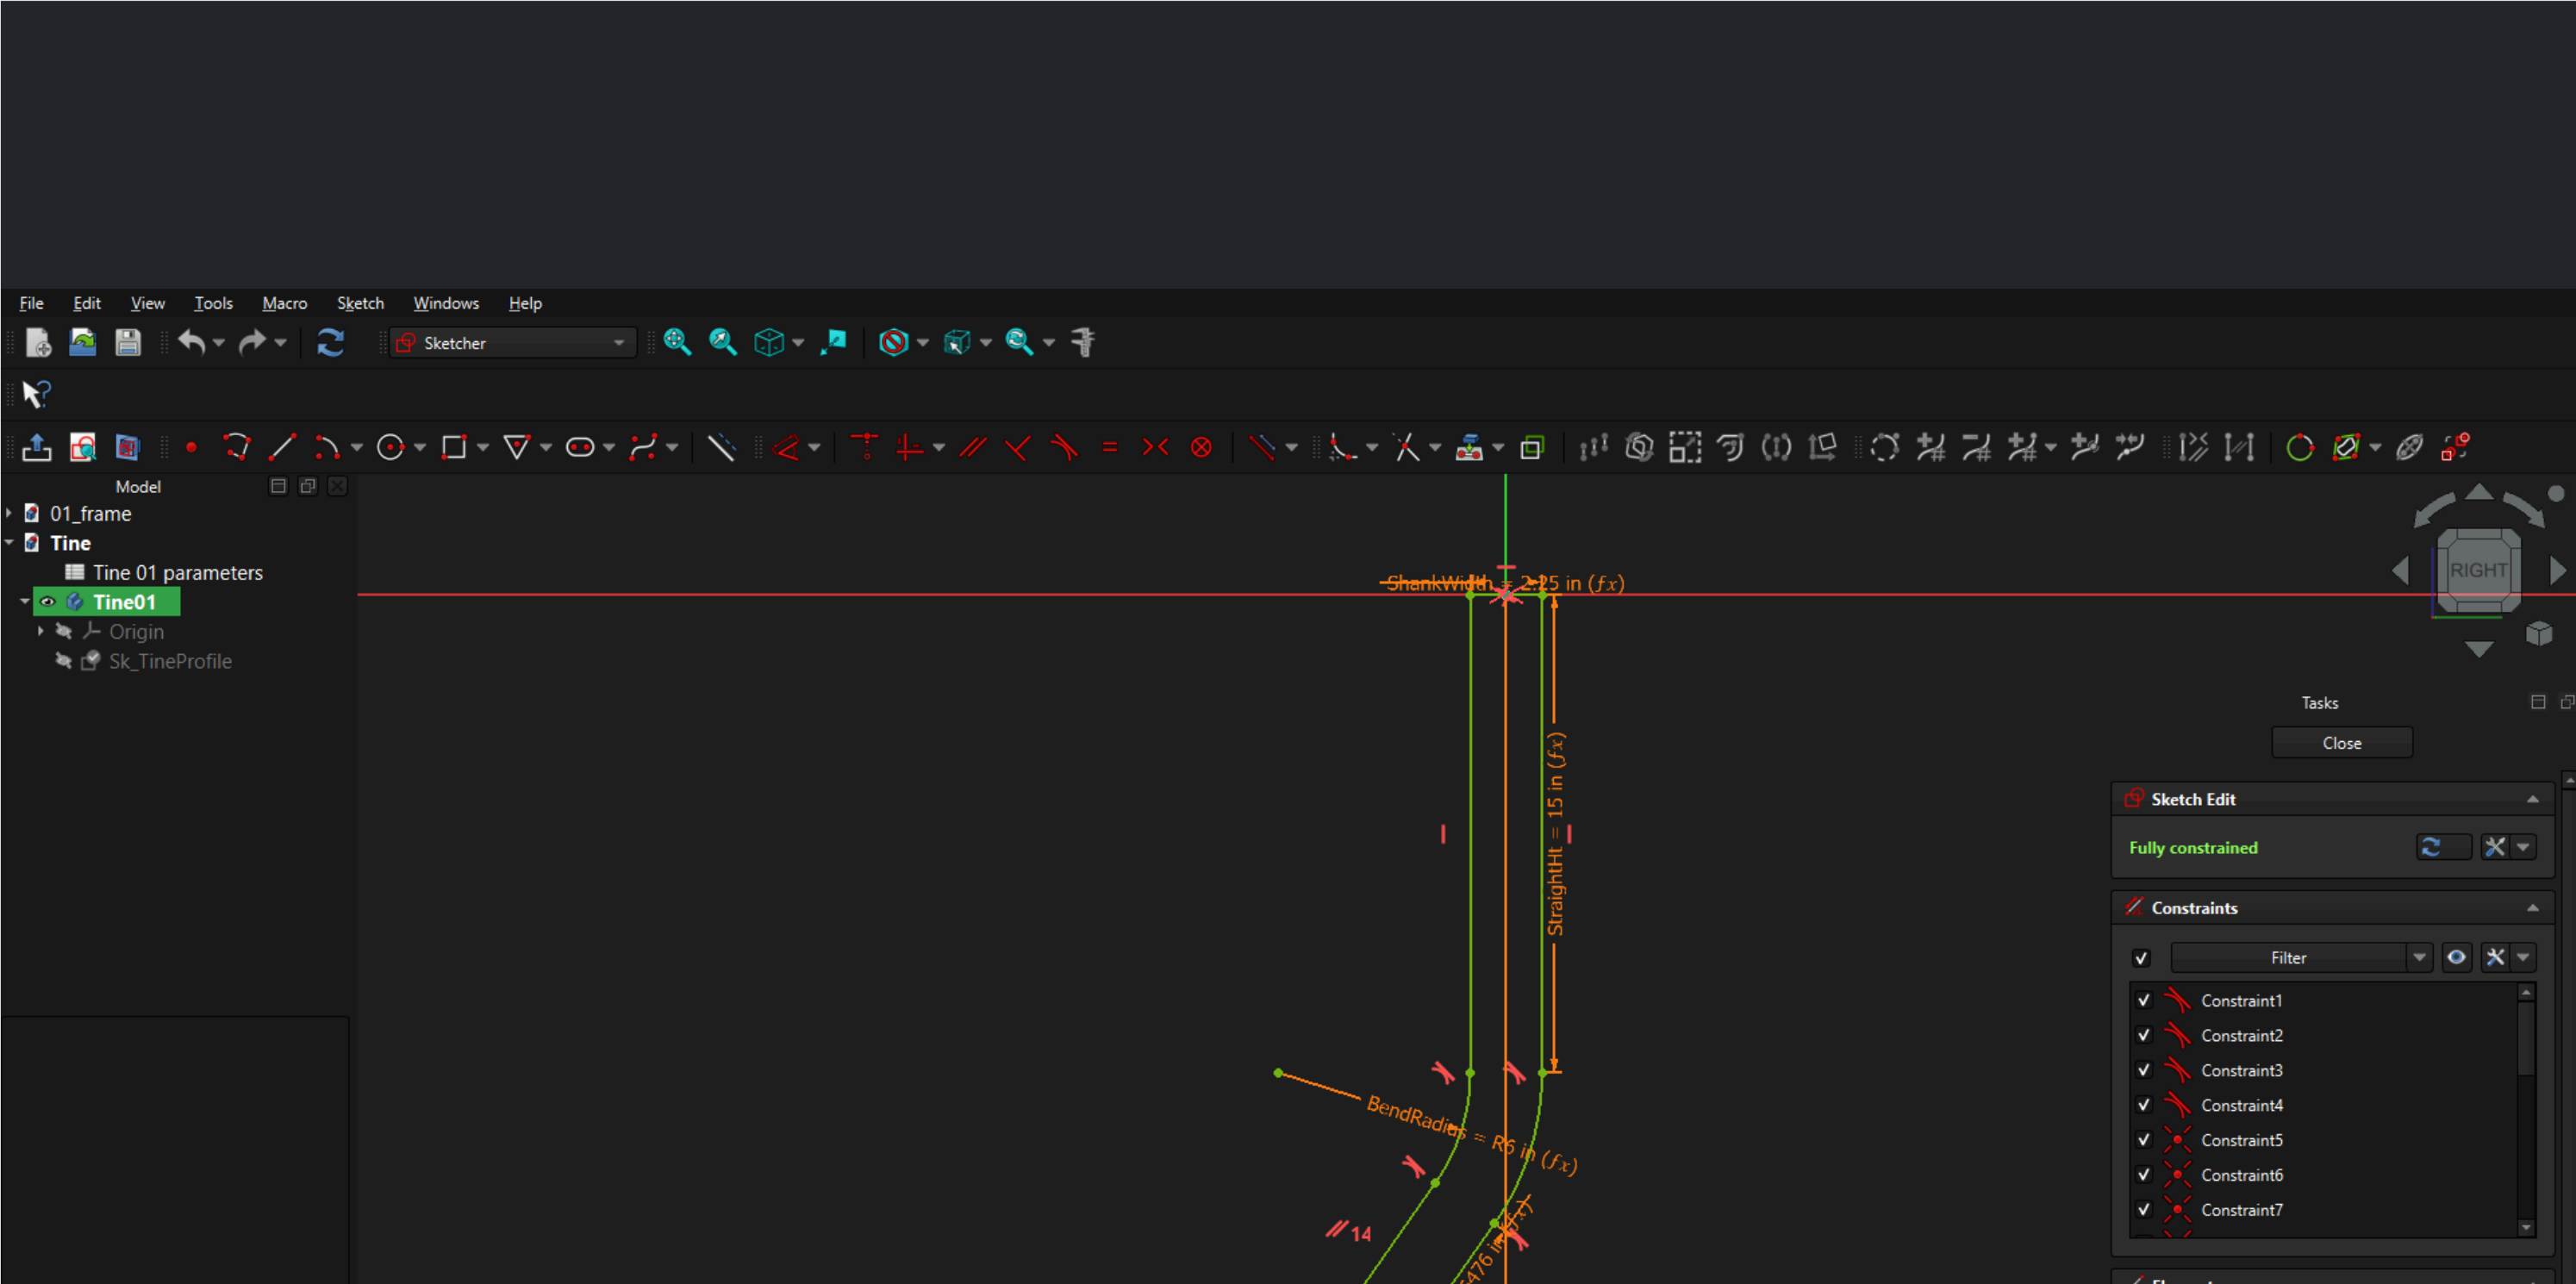

- **25 inches** is the whole tyne, measured along the bar.
- **15 inches** is the straight part at the top.
- The bend and the foot make up the remaining 10 inches.

The rake angle and the bend radius are **our choice** — the tutorial gives neither. We use 35 degrees and a 6 inch inner radius. Both are spreadsheet numbers, so change them if you disagree.

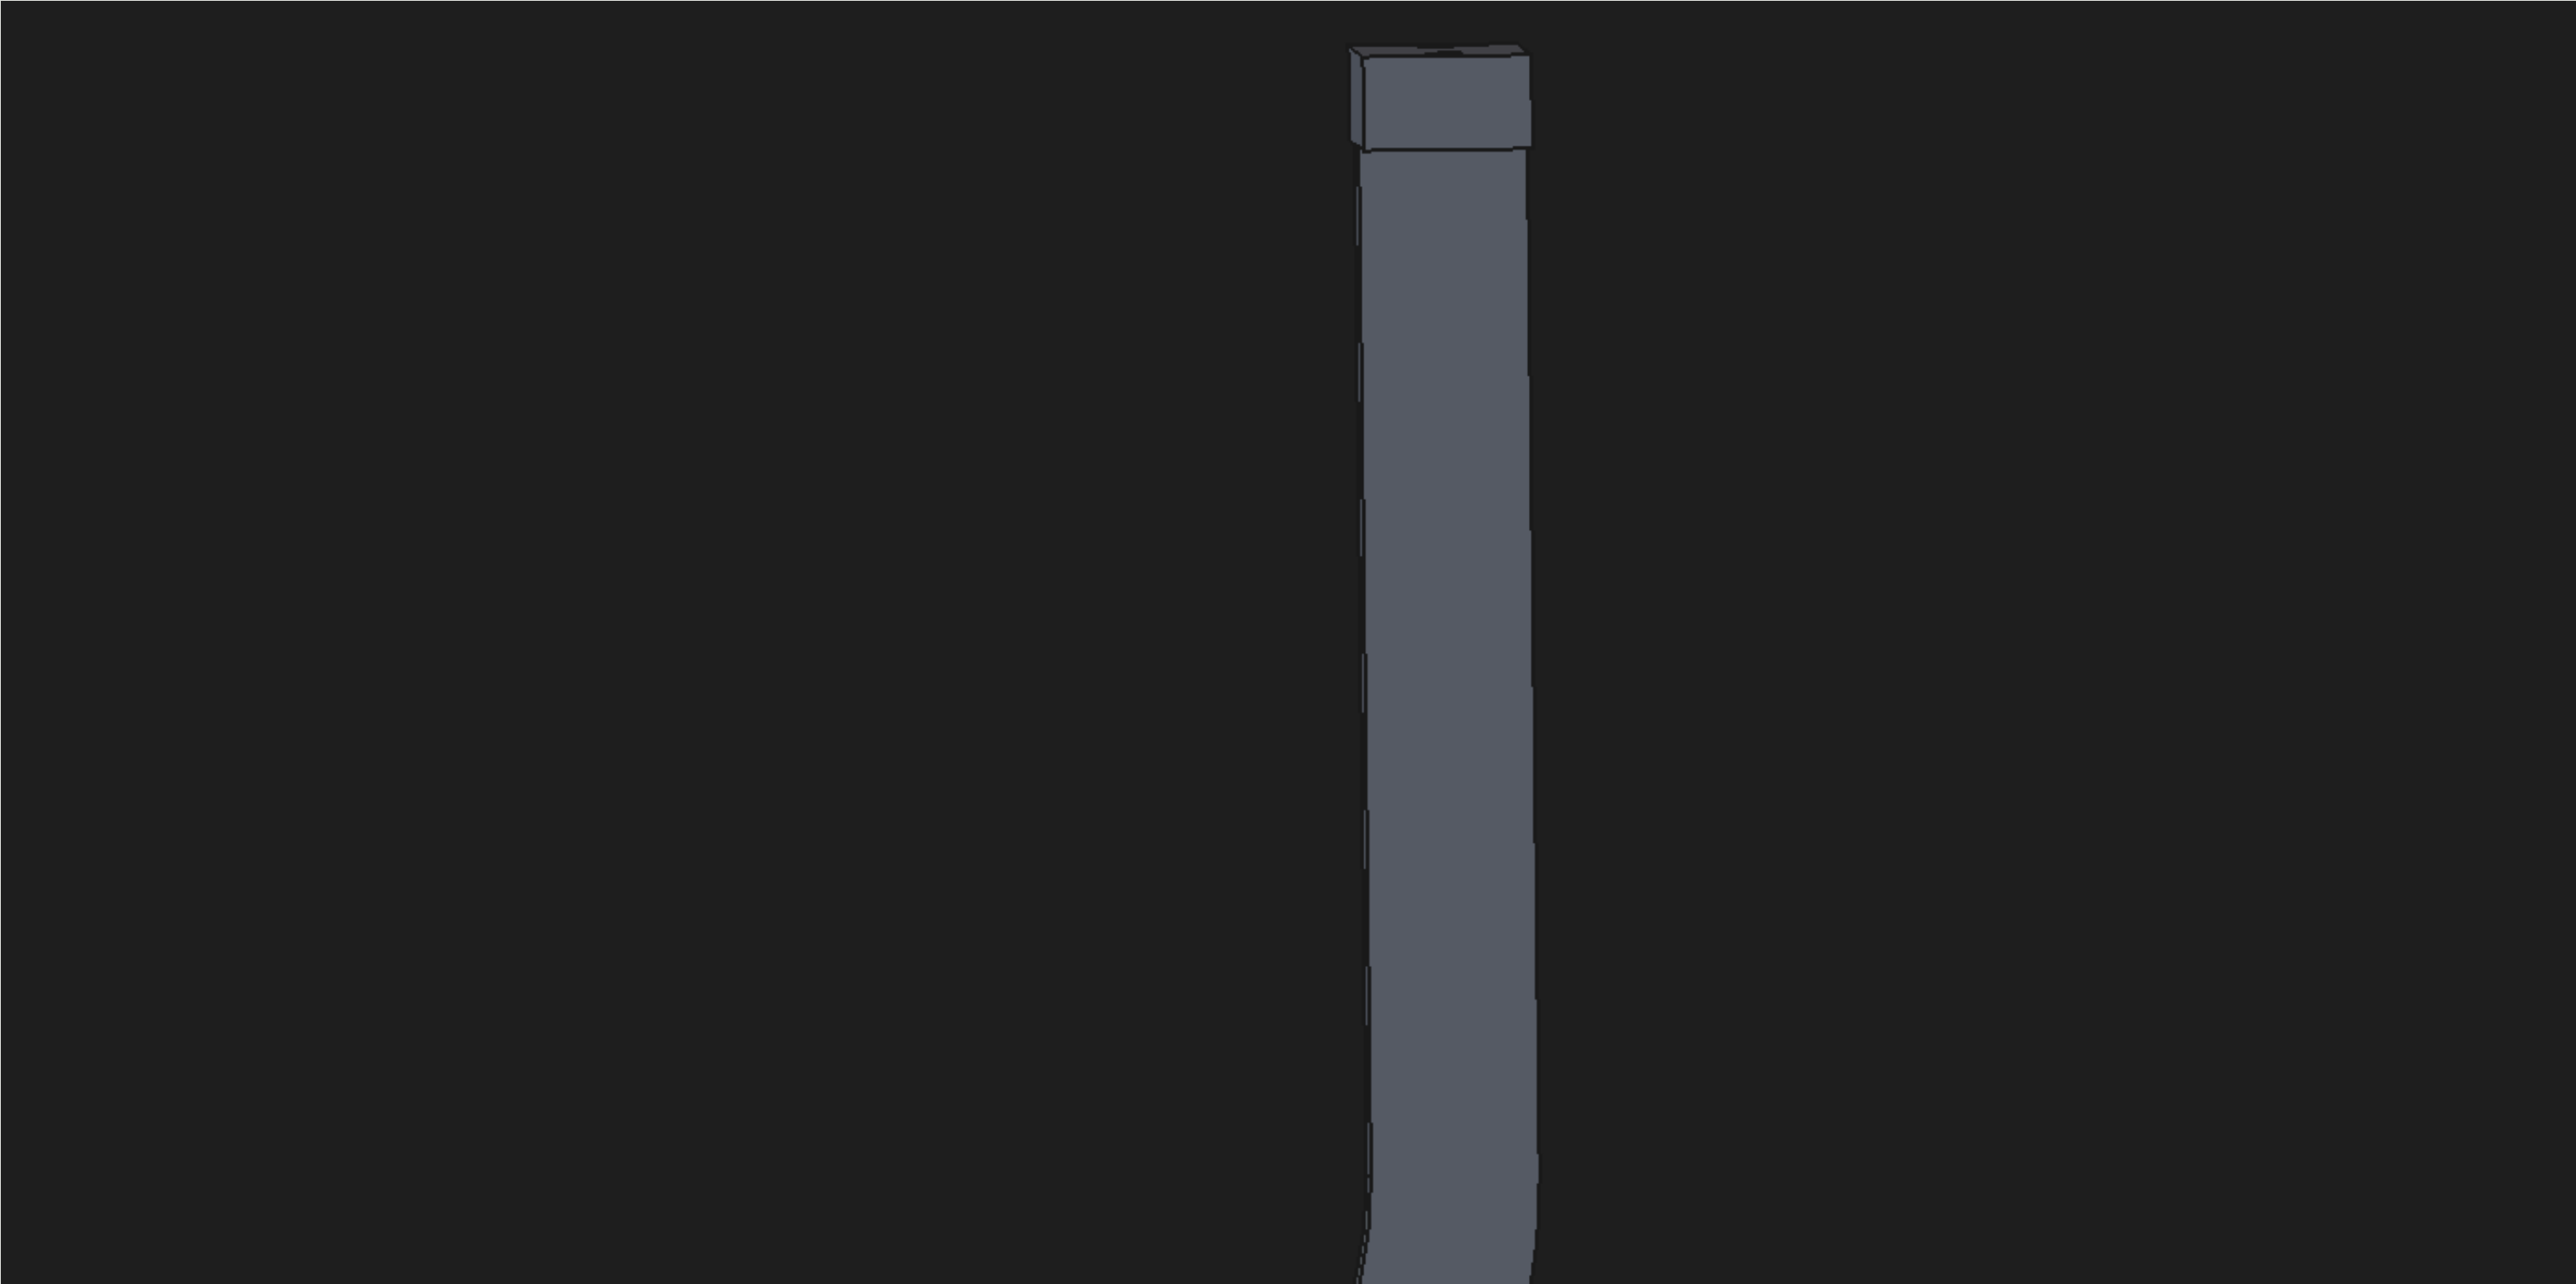

The profile

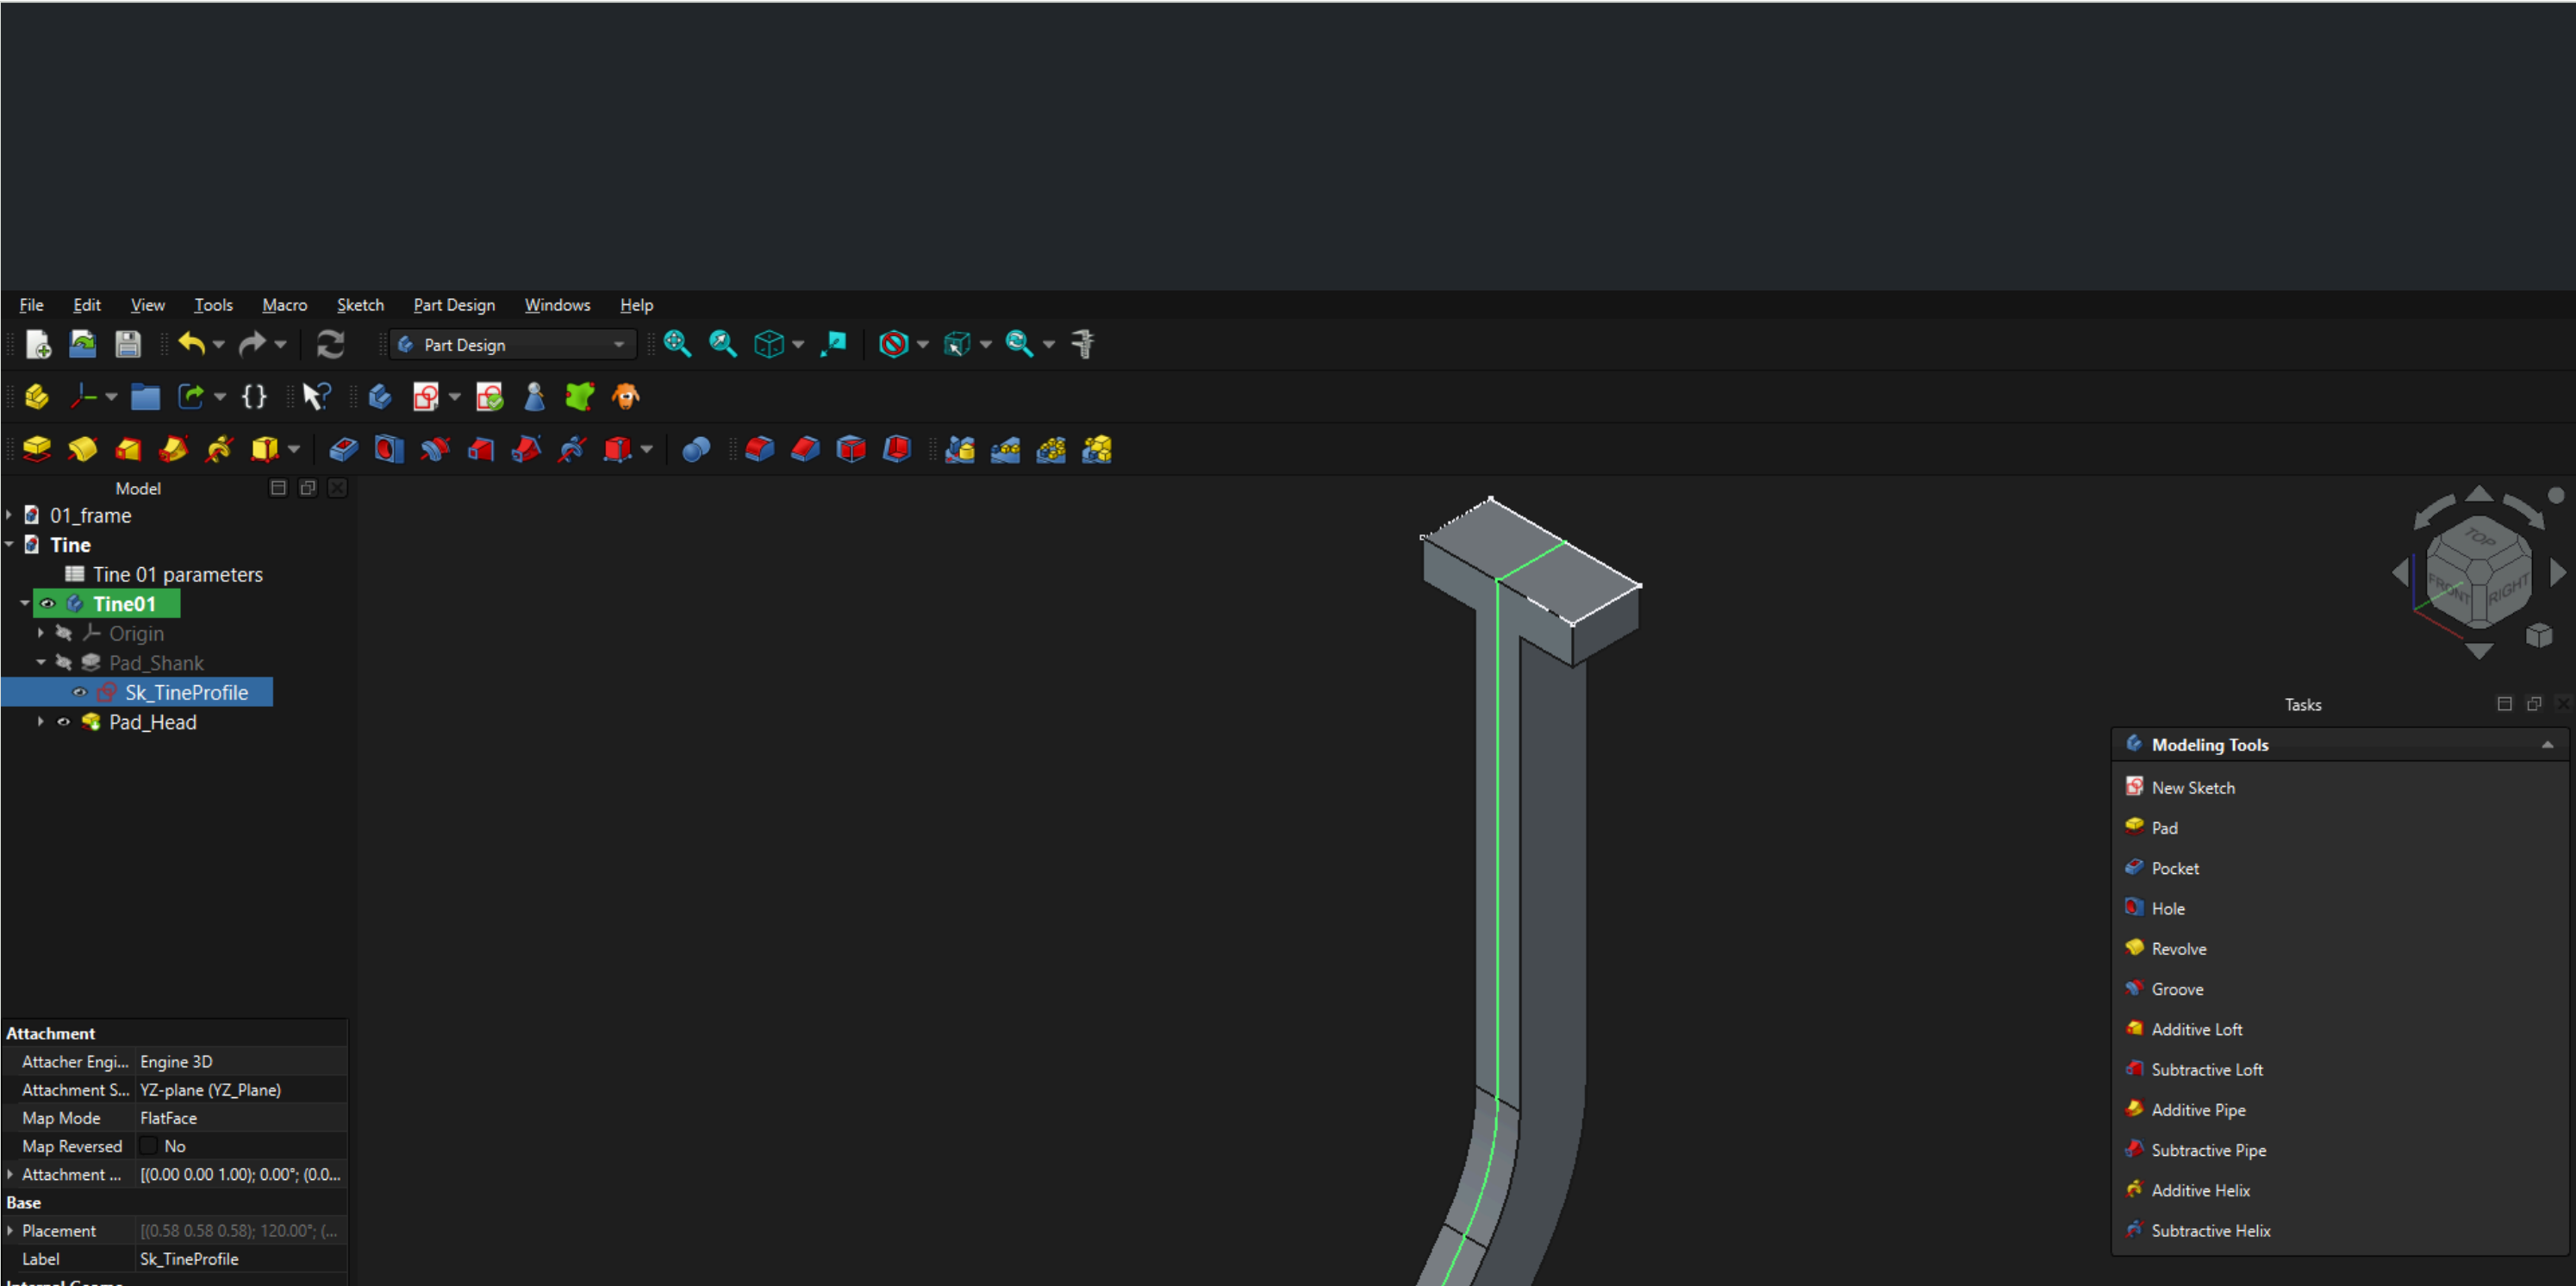

Two rules people forget

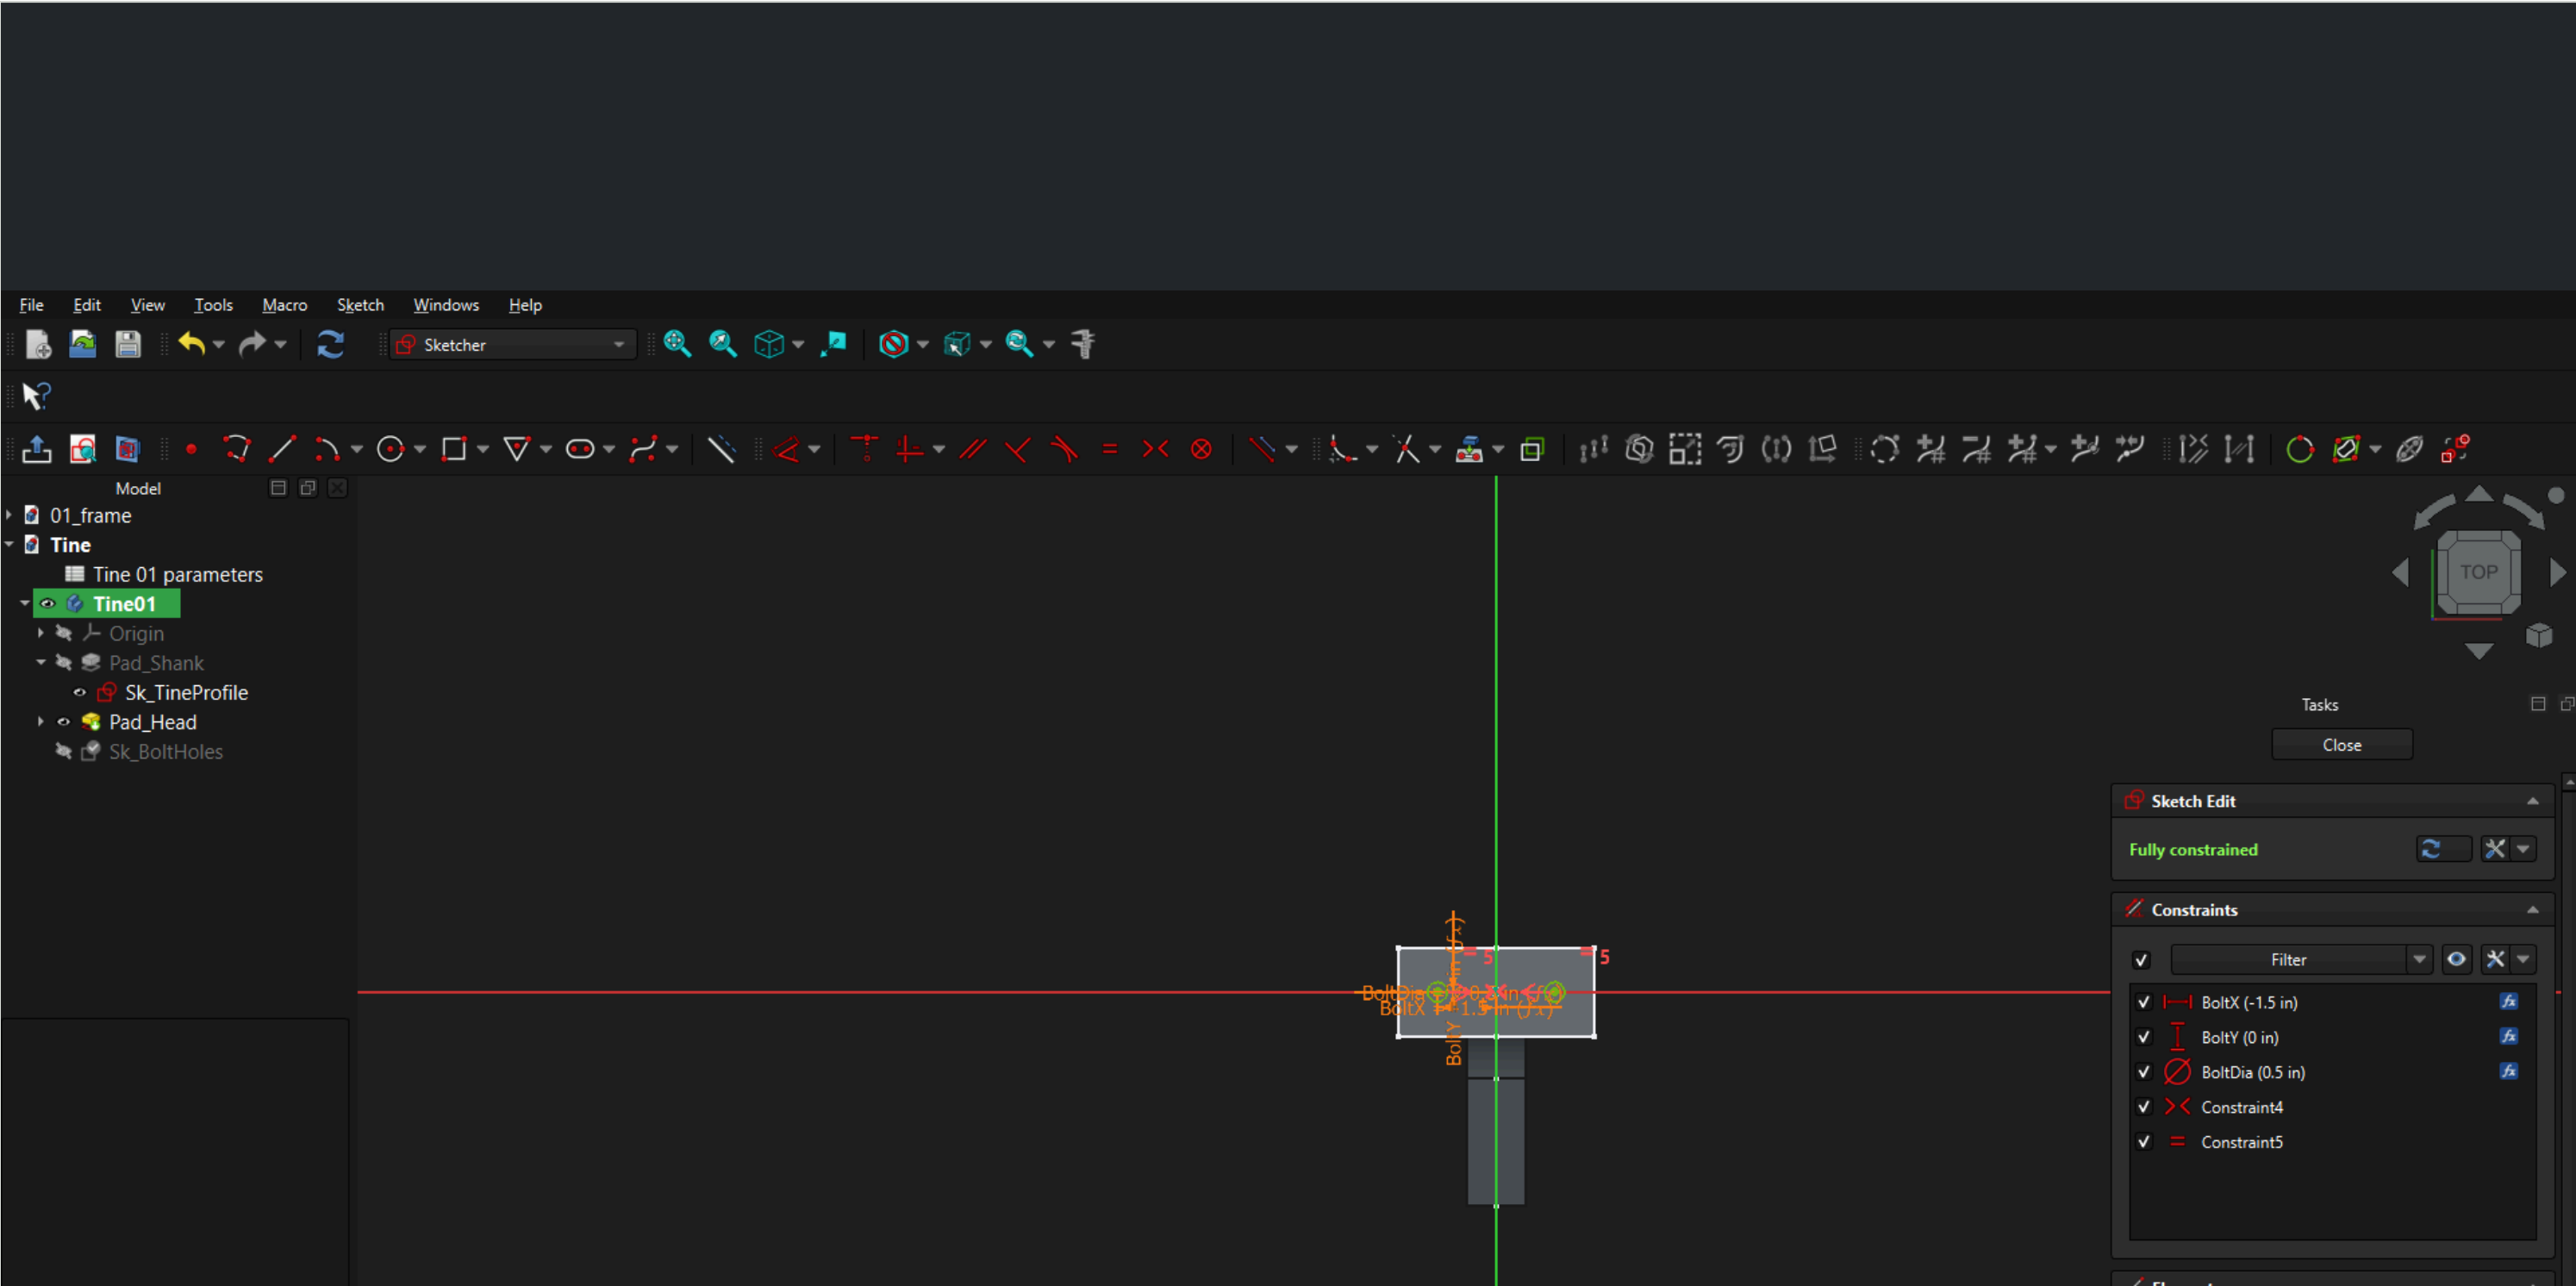

Dimension the reach, not the angle

From outline to solid

The mounting bolts
